# How automated cyber risk management reduced processing time by 70% to prevent OCR audit penalties

A medical provider found out performing an assessment with a looming deadline can result in inaccurate results, a dissatisfied auditor and potentially significant downstream consequences.

CyberCompass™ came to the rescue by demolishing a looming deadline, getting an OCR audit dismissed and preventing an estimated $500,000 fine.

Not Prepared to Respond

The provider is a well-established healthcare practice with over 150 employed staff throughout 4 locations.

Their on-premises IT systems are managed by a Managed Services Provider (MSP). They suffered a minor breach by today's standards and reported the incident to the Office of Civil Rights (OCR). As a result, the OCR requested a risk assessment from the client.

The original assessment, completed by the client's attorney, was deemed inadequate by the OCR.

The OCR required an adequate assessment and risk management plan. Other companies quoted them 10 weeks at double the cost for the assessment alone. With only 2 weeks to deliver, they found **CyberCompass™**.

CyberCompass™ only needed 7 days at half the cost to provide all the assessment, audit ready report, risk management plan and other remediation they needed.

CyberCompass™, an automated cyber risk management platform, was utilized to complete:

- Comprehensive assessment of twelve interview surveys
- Four facility inspections
- System vulnerability and compliance scans
- Generation of audit ready report; overall and dept risks
- Generation of risk mgmt plan and policies & procedures

Rapid Response: Completed in 4 days

CyberCompass™ promised a 7 day turn around, but with the unique capability for multiple users to perform multiple assessments simultaneously, it was completed in just 4 days.

Body of Evidence Delivered

CyberCompass™ generated the audit report, risk management plan, policies and procedures and strategic plans immediately.

HHS OCR dismissed the case, approving the security risk assessment, audit report, risk management plan, policies and procedures and strategic plans with **no penalty**.

Are you prepared for a cyber incident or breach?

Are you facing an audit or overwhelming deadline due to a breach? Uncertain of your security against cyber criminals?
